

## Cellar Conversion Farnham Surrey.

Farnham has many underground water courses and one of them was affecting the cellar of this property really badly.

When the customer bought this property the cellar had been half filled with rubble and with a concrete slab placed over the top, thus creating a 'dry' crawl space about 1.2m deep, all previous attempts at waterproofing having failed and the cellar used to fill with up to a meter of water after heavy rainfall.

We removed the concrete slab and rubble beneath and installed one of our sub-floor drainage systems before completing all the interior finishing works to create a lovely home office and adding about 20% to the overall living space.
