

Cellar Conversion, to wine cellar Ticehurst Surrey

The top three pictures show the installation of the waterproofing system following the removal of the brick on earth floor which revealed a quagmire of saturated clay.

The waterproofing system consists of an underfloor drain channel (Waterguard) which can be seen in the top RH picture at the base of the cavity wall drain membrane as a grey strip. The top left picture shows the sump and pump system which was ultimately concealed within a corner cupboard. A membrane was applied to the floor with a new concrete floor slab laid over it.

The walls were then lined with decorative brick and storage racks and the concrete floor was finished with earthenware tiles.

The main picture, to the left, show the beautiful and atmospheric finished wine cellar.
